FILL YOUR HEART WITH LOVE, CARE THIS MONTH

American Heart Month Draws Attention to our Number One Cause of Death

St. Charles County, Missouri – More than 70 million Americans live with some form of heart disease, and this is the #1 cause of death in the United States. Since 1964, February has been declared American Heart Month to draw attention to this alarming statistic and to seek ways to prevent heart disease.

Coronary artery disease is the most common heart ailment in the United States. Caused by an obstruction in the blood vessels supplying the heart, the classic heart attack symptoms are chest discomfort (a strong pressure or squeezing sensation); pain in the arms, abdomen or neck; shortness of breath; cold sweats; nausea; and light-headedness. Those experiencing one or more of these symptoms should call 911 within five minutes, as immediate medical attention greatly increases the chances for surviving a heart attack. It's interesting to note that women are more likely to experience a burning sensation in the chest and nausea, which is why they often mistake a heart attack for indigestion and miss early warning signs that could lead to more effective treatment.

Another deadly cardiovascular system ailment is stroke. A stroke occurs when the blood supply to the brain is cut off, and brain tissue dies as a result of the limited oxygen. Common stroke symptoms are sudden weakness or numbness in the face, arm, or leg on one side of the body; sudden loss of vision; sudden confusion or inability to speak; severe headaches; and unexplained dizziness. As with a possible heart attack, those suffering any of these symptoms should seek immediate medical attention.

To reduce the risk of cardiovascular disease, the American Heart Association offers these tips:

- Exercise regularly, at least 30 minutes each day
- Develop good eating habits
- Reduce sodium, cholesterol and saturated fat intake
- Avoid tobacco, drugs and excessive alcohol consumption
- Consult with a medical professional regularly

The St. Charles County Department of Community Health and the Environment is committed to the protection and enhancement of health and the quality of life for all members of our community.
